

Usage Monitor — Settings

Set up how and when you'd like to hear about your usage.

ALERT THRESHOLDS

Add as many percentage checkpoints as you'd like, you'll get pinged every time usage climbs past one, tracked separately for each limit (session, weekly, and so on).

SLACK ALERTS

Want a heads-up in Slack when a limit gets close? Here's how to connect it:

1. In Slack, open your app settings and go to **Incoming Webhooks**.
2. Click **Add New Webhook to Workspace** and pick a channel.
3. Copy the webhook URL Slack gives you and paste it below.

Webhook URL

Leave this blank if you'd rather not use Slack.

DISCORD ALERTS

Prefer Discord? It's just as quick from your server settings:

1. Open **Server Settings** → **Integrations** → **Webhooks**.
2. Click **New Webhook** and name it whatever you like.
3. Copy the webhook URL and drop it in below.

Webhook URL

Leave this blank if you'd rather not use Discord.

TELEGRAM ALERTS

Telegram takes one extra step since it needs both a bot and a chat ID:

1. Message **@BotFather** on Telegram, send /newbot, and copy the token it gives you.
2. Send your new bot any message, then visit <https://api.telegram.org/bot<TOKEN>/getUpdates> in a browser.
3. Find your chat ID in that response and paste both values in below.

Bot token

Chat ID

Leave both blank if you'd rather not use Telegram.

SELF-HOSTED DASHBOARD

Running your own dashboard at home? Point the extension at it to keep a history there too:

1. Get the backend/ server running (see backend/README.md in the repo).
2. Enter its address below, e.g. `http://192.168.1.50:3000`.
3. Saving will prompt Chrome to ask permission for that address — that's expected, just approve it.

Backend URL

Leave this blank if you don't have one set up.

TEST YOUR ALERTS

Curious if a channel actually works? This sends a friendly test message to everything filled in above, right now even before you hit "Save" without counting as a real alert.

ADVANCED

By default, Usage Monitor only checks your usage when you open the popup or click "Check Now" — nothing runs behind the scenes otherwise. Prefer it to check on its own instead?

- ☒ Check for updates automatically in the background, every 5 minutes
